

# Engineering

The E-Fab engineering team features decades of experience helping customers bring ideas off the computer into production and out in the real world. Our engineers are well-versed in the latest technology, available materials, and efficient manufacturing processes. We take pride in finding subtle ways to improve a component's performance, durability, and cost-effectiveness.

## Why Experienced Engineers are Important

Running headlong into production without thoroughly examining plans, goals, and component specifications can be costly and damaging to a reputation. We dedicate the time up front with our customers to ensure each part will perform as designed.

### The Strength of Partnerships

We work hand-in-hand with our customers to analyze and refine their concepts to ensure every part we deliver lives up to its promise.

### Lower Costs

E-Fab customers enjoy better results and improved cost efficiency by making informed decisions at the beginning of the process.

### Metal & Material Options

The E-Fab team understands the benefits of working with an assortment of metals and materials and can help select the metal for your part that is durable, reliable, and cost-efficient.

### The Right Process

The right manufacturing process is vital to producing a part that meets precise specifications. We're experts at picking the best method to ensure your part is accurate.

## Our Certifications

ISO 9001:2015

ITAR

We are  **E-FAB**  
A TPC COMPANY

We are an expert team of engineers, manufacturers, and quality assurance specialists that deliver precision parts with ultimate accuracy. We serve technology companies, defense contractors, medical equipment manufacturers, and innovators from our Santa Clara, California headquarters.
